GATOR GRID GG 20-20 BIAXIAL NO MEMORY (1300 lbf/ft)
BIAXIAL GATOR GRID FOR: STAIRCASE, PATIO, LANDING AREA AND MORE
TDS Revision Date (dd/mm/yyyy): 21/01/2020

TECHNICAL DATA SHEET

Update: January 21, 2020
Make sure you have an updated data sheet on hand.
Canada and U.S. dial 1-855-847-7767 or (450) 624-1611

Description: GATOR GRID GG 20-20 Biaxial NO Memory (1300 lbf/ft) is a High Tenacity Polyester yarn combined
to on-line coating with Oil mixed PVC on the Geogrid. Gator Grid GG 20-20, a biaxial geogrid, provides
strength, longevity, excellent stress transfer and prevents failure to the internal structure of your
staircases, patios, landing areas and low retaining walls. As a biaxial geogrid, GATOR GRID GG 20-20
has a high molecular weight as well as high-tenacity polyester yarns. Once unrolled on the ground, this
Geogrid without memory remains flat once unrolled.

Features:
• UV-Resistance
• Ageing resistance
• High tensile strength
• Easily combined with gravel and soil
• No Memory

Benefits:
• Biaxial: can be installed in both directions
• Adds strength, stability and longevity
• Helps reduce stress and load transfer to the structure
• Soil separation for added stability
• Remains flat once unrolled

Uses:
• Patio internal structure
• Staircase internal structure
• Erosion control
• Sub-grade stabilization
• General landscape
• Low height retaining walls system

Roll sizes: 4’ X 50’
Typical Properties:

Application instructions:

Method of application of GATOR GRID GG 20-20 Biaxial (1300 lbf/ft) soil stabilization for added stability:

Anchor and stretch Gator Grid before installing the next layer of aggregate and block.

Disclaimer for Gator Grid GG 20-20 No Memory:
The soil composition may vary from location to location. Global stability of the soil has not been considered. It is the owner’s responsibility to take into consideration the soil parameters indicated on the label and to ensure that the soil’s properties meet construction standards. A soil analysis must be done before starting any wall project. Before the construction of your segmental wall and before using any type of Gator Grid and establishing the placement, consult a qualified local engineer and obtain a stamped plan. To ensure the structural integrity of your segmental retaining wall, follow manufacturer instructions and installation steps for the construction of your wall. These placement tables are not to be used on multi-tiered walls or in areas with excess water runoff, seepage or springs, unless first otherwise confirmed by a qualified local engineer. Additional Gator Grid than what appears on the label may be required in your application. This document should not be construed as engineering advice. We assume no liability of any kind if the instructions in the present disclaimer are not followed or if the owner’s use of the product is different than the one for which it is intended.
